

SharePoint Workflow

Enterprise BPMS

Cross the Chasm from Workflow to Dynamic BPMS with AgilePoint

Value to Your Business

- Easily create, manage, and govern complex workflows for SharePoint.
- Empowered power users and business process analysts for new levels of productivity gain.
- True end-to-end collaboration between Business and IT. (Not hand-off)
- Seamless move from workflow to enterprise dynamic BPMS.
- Significantly accelerated time-to-market and change management.
- Heavily reduced IT churning and costs.
- Dynamic adaptation of running processes.
- Always in control over processes.

The Right Framework for the Enterprise

- Easy to use with familiar Microsoft software.
- Highly visual. Drag and Drop. WYSIWYG.
- Metadata-driven IT asset abstraction framework. (not code based)
- Enables IT to create business-friendly, process-aware service components.
- Assemble service components into directly executable process model with true Model-Driven Architecture.
- Completely modular and extensible. Simply add service components as desired for deeper functionality.
- SOA-aligned Architecture.
- Full reporting and governance.
- Compliant with Microsoft Gold-Level Customization Policy. Keeps SharePoint clean for ease of support and upgrade.

SharePoint Integration Features

AgilePoint includes a feature rich set of Web Parts for SharePoint and a bundle of 20+ pre-packaged, common SharePoint related activities or SOA services, so it is quick and easy to get started building end-to-end business processes that include Windows Workflow Foundation (WF) processes and SharePoint interaction.

The AgilePoint Web Parts provide functionality such as:

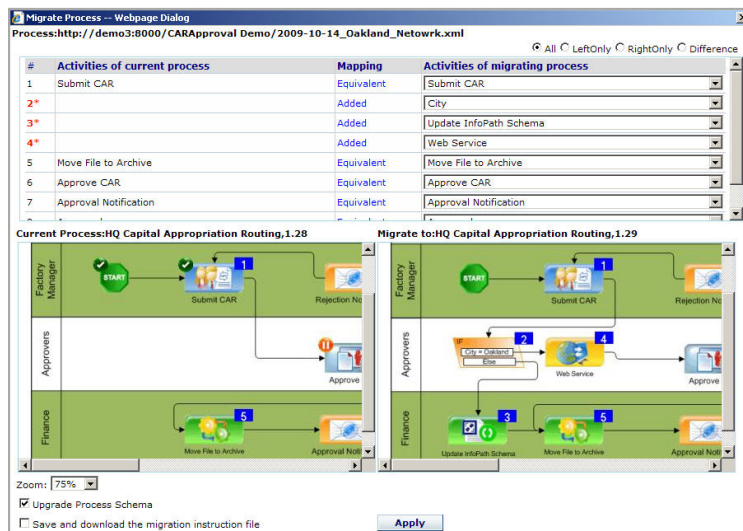

- ✓ Individual Task Lists for completing tasks with a rich set of intelligent manageability capabilities and Forms Server integration.
- ✓ A viewpoint of running AgilePoint BPMS process instances.
- ✓ Process Template list for one-click process initiation.

AgilePoint provides a user-friendly, Visio-based integrated composition environment that allows you to bind dynamic AgilePoint workflow solutions to almost any SharePoint entity such as:

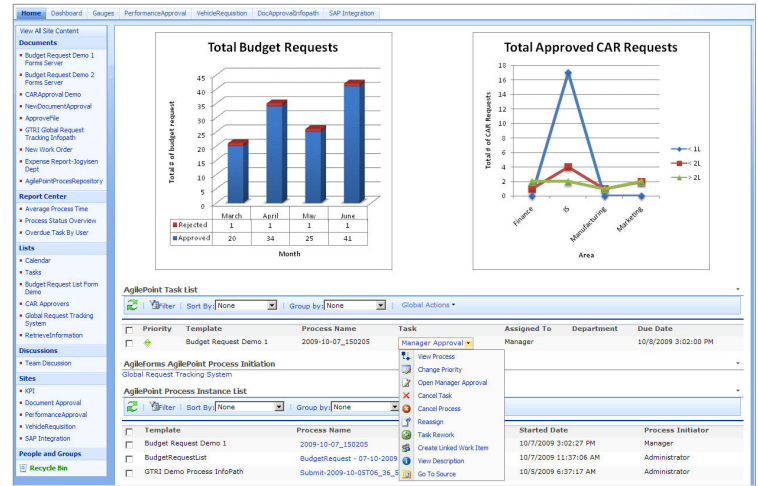

Sites, List Items, Document and Form Libraries, Content Types

Form Technology Agnostic

AgilePoint supports a broad range of form technologies including InfoPath, SharePoint List Form, ASP.NET, Win Form, WPF, etc. AgilePoint also provides AgileForm, a powerful form builder component, that enables business users to create complex Web forms which can be rendered into ASP.NET with no code.

Powerful in-flight adaptation management—process migration.

Full-featured BPM workspace based on SharePoint—task management, monitoring, governance, reporting, etc.

Powerful Governance

AgilePoint combines a full audit trail with powerful administrative capabilities to adjust business processes in-flight to handle:

- Process Migration
- Partial Task Rework
- Reroutes
- Task Reassignment
- Adding Steps
- Adding Participants
- Changing Process Data
- Skipping Steps

“EquaSiis leverages AgilePoint BPMS and SharePoint to deliver world class business and IT services sourcing, procurement and management capabilities to Fortune 500 companies through Software + Services. AgilePoint’s true model-driven architecture delivers process-based enabling technologies for SharePoint. The result is significantly reduced time and cost required to create and maintain SharePoint based complex workflows and dynamic composite business applications by up to 5X.”

System Requirements

AgilePoint works with Windows SharePoint Services (WSS) and Microsoft Office SharePoint Server (MOSS) 2007 and 2010.
